2012 年 IFTA シンガポール大会に向けて ※

**Message from Mr. James Isilay (STA)
Algorithmic Trader - Axpo Trading AG**

Dear Japanese Friends,

It is a great honor to be invited to present at the 25th Annual IFTA conference in Singapore. The theme of the conference is "Approaches for the Next Decade". With this in mind, my talk is focused on my own experiences in the world of automated trading where I have researched and used a number of technologies to build a successful trading desk at Axpo Trading AG in Switzerland.

As technical analysts the new tools that automated trading platform's have opened up to us present a great opportunity to validate our ideas and to create new technical analysis techniques. The price for this is that we need to master these new tools and programming languages.

In my presentation I intend to take you through the challenges I have faced building a fully automated trading system. We will explore the technologies and research methods I use and share my ideas on where trading technology goes next. The talk should form a strong foundation for you to start exploring these technologies yourself and mastering new tools.

I have attended the IFTA conference twice in the past in Berlin (2010) and Sarajevo (2011). I can say with strong confidence that both conferences have enhanced my career and helped me to be successful with my trading. It is not just the new technical analysis ideas that make the IFTA conference such a strong success, it is also the friendships formed and people networks that can be built.

I look forward to seeing you all in Singapore, where we can share ideas and advance the study of our field together.

James Isilay
Algorithmic Trader
